

## FLOAT AND THERMOSTATIC STEAM TRAPS FLT80

### DESCRIPTION

The ADCA FLT80 is a series of high capacity float and thermostatic steam traps with integral air vent, designed for modulating discharge of condensate to ensure maximum system heat transfer. Specially designed for applications where continuous drainage is essential and high loads are involved.

### MAIN FEATURES

High capacity.  
Modulating discharge of condensate at steam temperature.  
Unaffected by sudden or wide load and pressure variations.  
No backing-up with condensate.  
Excellent air discharge through its integrated thermostatic air vent.

**OPTIONS:**               Stainless steel construction.  
                              Drain connection.  
                              AFZ – Anti-freeze device.  
                              BDV – Blowdown valve.

**USE:**                    Saturated and superheated steam.

**AVAILABLE MODELS:**       FLT80S – carbon steel.

**SIZES:**                 3" and 4"; DN 80 and DN 100.

**CONNECTIONS:**       Flanged EN 1092-1 PN 16.  
                              Flanged ASME B16.5 Class 150.

**INSTALLATION:**       Angled horizontal installation.  
                              See IMI – Installation and maintenance instructions.
