

## SELF-ACTING TEMPERATURE REGULATORS TR25 (1/4" and 3/8")

### DESCRIPTION

The ADCATrol TR25 series of temperature regulators were designed for direct acting temperature control systems where the valve closes on temperature rise. They are single seated, unbalanced and intended to be coupled with T series thermostat model T.205. The liquid filling the thermostat expands when the temperature of the fluid being heated rises, closing the valve.

These valves are used for controlling temperature in central and district heating systems, heat exchangers and other HVAC and industrial applications.

### MAIN FEATURES

- Easily adjustable temperature range.
- Proportional temperature control.
- Single seated, two way, direct acting valve.
- Built-in strainer.
- Narrow thermostat neutral zone (1,5 to 2,5 °C).
- No special tools required for servicing.
- Stuffing box is an integral part of the thermostatic element, allowing easy and simple maintenance of the valve.

- OPTIONS:
- PK sensor pocket.
  - K1 cooling unit.
  - Different capillary lengths.
  - Other thermostats on request.

- USE:
- Saturated and superheated steam.
  - Hot and superheated water.

- AVAILABLE MODELS:
- TR25SS – stainless steel.

- AVAILABLE THERMOSTATS:
- T.205 – 400 N (max. closing force).

- SIZES:
- 1/4" and 3/8".

- CONNECTIONS:
- Female threaded ISO 7 Rp.

- THERMOSTAT RANGES:
- T.205: 0 to 60 °C, 30 to 90 °C and 60 to 120 °C.

- INSTALLATION:
- Horizontal installation with the thermostat in the vertical position, in order to reduce wear.
  - In case of medium temperatures up to 150 °C, the thermostat may be fitted below or above the valve. In case of medium temperatures between 150 and 250 °C, a cooling unit type K1 has to be applied with the connection pointing downwards.
  - A "Y" strainer should be installed upstream of the valve.
  - See IMI – Installation and maintenance instructions.

Optional PK sensor pocket

Optional K1 cooling unit

CE MARKING – GROUP 2 (PED – EUROPEAN DIRECTIVE)	
--	--

PN 40	CATEGORY
1/4" and 3/8"	SEP

BODY LIMITING CONDITIONS	
--------------------------	--

PN 40 ALLOWABLE PRESSURE	RELATED TEMPERATURE
40 bar	120 °C
24 bar	350 °C

Minimum operating temperature: -10 °C.

TR25 – T SERIES THERMOSTATS – FTO, UNBALANCED TRIM, METAL SEALING (CLASS IV)

MODEL	SIZE	SEAT Ø (mm)	Kvs (m³/h)	STROKE (mm)	MAXIMUM PERMISSIBLE PRESSURE DROP (bar)
					T.205
TR25 – 8/4	1/4"	4	0,2	6	40
TR25 – 8/6	1/4"	6	0,45	6	40
TR25 – 10/9	3/8"	9	0,95	6	38

PROPORTIONAL BAND

The proportional band is the temperature change required for the valve to move from its fully open to fully closed position. It depends on the valve stroke (mm) and on the thermostat movement per °C (mm/°C), and is calculated as follows:

$$\text{Proportional band} = \frac{\text{Valve stroke (mm)}}{\text{Thermostat movement (mm/°C)}}$$

Thermostat movement for T.205 and T.405: 0,5 mm/°C.

A proportional band between 8 °C and 13 °C is suitable for most applications. A smaller proportional band is not ideal when heat loads vary rapidly.

DIMENSIONS – VALVE BODY (mm)

SIZE	A	B	C	F	G	WEIGHT (kg)
1/4"	45	15	81	49	1"	0,9
3/8"	55	15	81	60	1"	1

DIMENSIONS – THERMOSTAT (mm)

MODEL	A	B	C	ØE	WEIGHT (kg)
T.205	305	405	210	22	1,8

MATERIALS		
POS. No.	DESIGNATION	MATERIAL
1	Body	AISI 303 / 1.4305
2	Bonnet	AISI 303 / 1.4305
7	* Valve plug	AISI 303 / 1.4305
9	* Spring	AISI 302 / 1.4310
10	* Spacer ring	AISI 304 / 1.4301
11	* Retaining ring	Stainless steel A2
12	* Gasket	Stainless steel / Graphite
15	* O-ring	EPDM

\* Available spare parts.

### K1 COOLING UNITS

Cooling units are used as a means of protection for the stuffing box when dealing with high temperatures.

The K1 cooling unit should always be applied when medium temperatures are between 150 °C and 250 °C.

For higher temperatures as well as for all hot oil systems please consult.

### PK SENSOR POCKETS

Sensor pockets made of stainless steel can be supplied with all TR series self-acting thermostats using rod sensors. A sensor pocket, also called thermowell, is used to protect the sensor and to allow its removal while the plant is running or, e.g., the tank where it is connected to is full.

The use of sensor pockets implies delay of heat transfer to the rod sensors and, thus, a longer thermostat reaction time. This is, to some extent, counteracted by filling up the sensor pockets with a thermal conductive paste or glycerine.

DIMENSIONS (mm)					
MODEL	ØD	H	L	R	SW
PK2	25	9	218	1"	36
PK4	25	10	390	1 1/4"	46

MATERIAL: AISI 316 / 1.4401.

INSTALLATION: The installation site for the sensor pocket is arbitrary when paste is applied. When glycerine is used, the sensor pocket must point at least slightly downwards.
